

Learning Unit Lesson Plans for Grades 9-12

Lesson 1

Mission: Access Water—Colorado River

Time: 50 minutes

Content Areas: Science, Social Studies, Language Arts, Workplace Skills

Lesson Overview/Purpose

During this lesson you will engage in a simulated convention to resolve disputes over the distribution of among the 7 Colorado River Basin States. Using 1920s census data you will formulate an oral argument to present at the convention. Afterwards, you will learn about how the U.S. government and the states agreed to split Colorado River Basin water between states. Finally, you will analyze and summarize the oral histories of people with personal experiences related to the Colorado River Basin.

Objectives

Students will:

- Analyze data to formulate an argument on a given topic.
- Argue a point supporting a particular position.
- Assess arguments and make a decision on an issue based on the information presented.

Vocabulary

- Acre Foot
- Aqueduct
- Basin
- Convention
- Oral History
- Tributary
- Watershed

Online Resources

- [CAP Videos](#)

Supplies/Materials/Equipment

- Internet connection and computer
- Notebook for journal entries
- Handouts provided in the lesson

Learning Unit Lesson Plans for Grades 9-12

Procedures

Step 1:

- Review key vocabulary that will be addressed in this lesson.

Step 2:

- Read the passage on the *History of the Colorado River Basin*.
- Create a “tree-map” or other graphic organizer to summarize your reading.

Step 3:

- Analyze the 1920s census data on the chart provided and make a list of arguments that Arizona representatives might have used as they engaged in the debates over Colorado River water.

Step 4:

- Summarize your learning by responding to the following questions in your journal.
 - What were some reasons for the debate over the Colorado River water resource in the 1920s?
 - What factors did you consider when solving the problem?
 - How might the lack of water to the various states affect the quality of life? Water quality? Population density?
 - What might be some of the economic advantages for a state to have large quantities of water? Disadvantages?
 - Why did it take Arizona so long to sign the Compact?
 - What economic effects do you think the allocated water has had on each state, both positive and negative?
 - Based on the 2007 census data, do you think the water allocations had an affect on the population growth within each state, decades later? Explain your answer.

Step 5:

- Expand on your learning by going to the CAP website and reading some of the oral histories of elderly individuals who tell about their experiences with the Colorado River or CAP water delivery system.
- Write a 1-2 page summary of what you learned from the oral histories.

Learning Unit Lesson Plans for Grades 9-12

Lesson 1—Activity 1: Review the key vocabulary that will be addressed in this lesson.

Vocabulary List

Acre-Foot	a • cre-foot <i>n</i> 1. The volume of water that would cover an area of one acre to a depth of one foot, equivalent to 1,244.5 cu. M/43,560 cu. ft. 2. The equivalent of 325,851.43 gallons
Aqueduct	aq • ue • duct <i>n</i> 1. a pipe or channel for moving water to a lower level, often across a great distance 2. a structure in the form of a bridge that carries a canal across a valley or river
Basin	ba • sin <i>n</i> 1. a broad area of land drained by a single river and its tributaries, or draining into a lake 2. any depression in the Earth's surface that contains water 3. a bowl-shaped depression on land or on the ocean floor into which sediments may be deposited
Convention	con • ven • tion <i>n</i> 1. a meeting of delegates representing a party or group
Oral History	o • ral his • to • ry <i>n</i> 1. the personal recollections of people who participated in historical events, recorded on audio or video tape or told to a younger generation
Tributary	trib • u • tar • y <i>n</i> 1. a stream, river, or glacier that joins a larger stream, river, or glacier, or a lake
Watershed	wa • ter • shed <i>n</i> 1. the land area that drains into a particular lake, river, or ocean

Lesson 1—Activity 2: Read the following passage. Create a “tree-map” or other graphic organizer to summarize your reading.

History of the Colorado River Basin

Located in the southwestern United States and northwestern Mexico, the Colorado River is 1,450 miles (2,330-kilometer) long with its headwaters in the Rocky Mountain National Park in north-central Colorado. The river is the primary source of water for a region that receives little annual rainfall. More than 1,000 years ago, Native Americans irrigated their crops with the waters from the river.

The Colorado River system, including the Colorado River, its **tributaries**, and the lands that these waters drain, is called the Colorado River **Basin**, or **watershed**. The Basin drains an area of 246,000 square miles (637,000 square kilometers), including parts of seven western U.S. states (Wyoming, Colorado, Utah, New Mexico, Nevada, Arizona, California) and Mexico. Three-fourths of the Colorado basin is federal land comprised of national forests, national parks, and Indian reservations. The drainage basin's total runoff is about 700 cubic meters (24,700 cubic feet) per second. It is the international boundary for 17 miles (27 kilometers) between Arizona and Mexico.

During the early 1900s, the states sharing the basin debated for shares of the Colorado River. In 1922, representatives from the seven states and the United States government created a compact allocating 15 million acre-feet to be shared by the states.

In 1922, representatives from the seven states and the U.S. government created the Colorado River Compact, which divided the states into upper and lower basins with provisions of 7.5 million acre-feet to be split among the states within each basin. The Boulder Canyon Project Act of 1928 was enacted to end pursuing interstate disputes. The act authorized specific water provisions for the lower basin states of Arizona, California, and Nevada. Specifically, California would receive an annual allocation of 4.4 million acre-feet; Nevada 300,000 acre-feet; and Arizona 2.8 million acre-feet. However, political and legal interstate disagreements ensued over for another 16 years, with Arizona being the last to sign the compact in 1944.

As a result of these agreements, various dams, lakes and **aqueducts** were formed with water feeding from the Colorado River Basin. Lake Mead a popular United States recreation site, located in the upper basin state of Utah, is created by the Hoover Dam, which holds Colorado River water as it exits the Grand Canyon. As the river travels south it meets the Central Arizona Project's (CAP) aqueduct and the Colorado River Aqueduct (CRA). The CAP aqueduct diverts water 336 miles east and then south from

Learning Unit Lesson Plans for Grades 9-12

Lake Havasu to Tucson, while the CRA aqueduct diverts the river water 242 miles west across the Mojave and Colorado Deserts and south to the Salton Sea (an inland salt-water lake) in California.

Colorado, Utah, New Mexico, and Wyoming make up the four upper basin states. Colorado has the largest share of upper basin water allocation, with Utah at 23%, Wyoming at 14%, and New Mexico with 11.25%. The Big Thompson Project, located in Colorado stores, regulates, and diverts water from the Colorado River on the western slope of the Continental

Divide to the eastern slope of the Rocky Mountains. The upper basin also encompasses the Navajo Indian Irrigation Project, situated in on part of the Navajo Indian Reservation located in Northwestern New Mexico. The Project, built by the U.S. Bureau of Reclamation, is used exclusively for Navajo lands on or next to the reservation.

Learning Unit Lesson Plans for Grades 9-12

Lesson 1—Activity 3: Analyze the 1920s census data on the chart. Make a list of arguments that Arizona representatives might have used as they engaged in the debates over Colorado River water in the space provided.

1920s Census Data for the Seven Colorado River Basin States

State	Statehood Year	Population 1920	Population 2007	Density* 1920	Density* 2007	Urban Residents 1920	Rural Residents 1920	Value of Crops (per square acre)
Arizona	1912	334,162	6,338,755	2.9	45	35.2	64.8	\$102.49
California	1850	3,426,861	36,553,215	22.0	217	68.0	32.0	\$137.06

Lesson 1—Activity 4: Expand on your learning by going to the CAP website and reading some of the oral histories of elderly individuals who tell about their experiences with the Colorado River or CAP water delivery system.

Learning Unit Lesson Plans for Grades 9-12

Lesson 2

The CAP Water Delivery System & Water Careers

Time: 50 minutes

Content Areas: Science, Social Studies, Language Arts, Workplace Skills

Lesson Overview/Purpose

During this lesson you will learn about the Central Arizona Project (CAP) water delivery system and its role in delivering its allocation of Colorado River Basin water in a cost-effective and environmentally sound manner throughout Pima, Pinal, and Maricopa Counties. You will identify some of the careers or jobs associated with the water delivery system and analyze the skills and knowledge necessary to fill such positions.

Objectives

At the end to lesson you will be able to:

- Summarize information presented using a graphic organizer.
- Devise a game that incorporates information presented.
- Develop a recruitment brochure highlighting a career related to water management and delivery.
- Evaluate a product using a rubric.

Vocabulary

- Agricultural
- Municipal
- Aquifer
- Percolate
- Hydrology
- Recharge
- Siphon

Online Resources

- [CAP Videos](#)
- Online Water Calculator <http://www.cagrd.com/index.php/general-information/conservation/water-calculator>
- Visit CAP Media Center or ***Climate Impacts on Water Supplies***

Supplies/Materials/Equipment

- Internet connection and computer
- Notebook for journal entries
- Handouts provided in the lesson
- Poster board or chart paper

Learning Unit Lesson Plans for Grades 9-12

Procedures

Step 1:

- Review key vocabulary for this lesson.

Step 2:

- Watch the video titled [CAP 101: A Refresher Course](#).
- Watch the video titled [Central Arizona Project: Recharging Water Resources for the Future on CAP's YouTube channel](#).
- Use the CAP Water Delivery System map to highlight parts of the system identified in the videos.

Step 3:

- Use the Internet to identify and research careers in water management and delivery systems.
- Create a job ad for a career from the list provided.
- Include the following details:
 - Required skills, knowledge, and education—field of study or major (engineering, science), if applicable
 - Duties
 - Rate of pay
 - Work hours
 - Work area (e.g. indoors, outdoors, rural area)
 - Any other important details

Step 4:

- Record and respond to the following questions in journal.
 - What is the main goal of the Central Arizona Project?
 - What is recharging? Why is it necessary?
 - What governing entities must collaborate to ensure that the CAP water delivery system operates? What would happen if they did not collaborate?
- Write a summary of what you learned about water management and delivery systems in journal.

Learning Unit Lesson Plans for Grades 9-12

Lesson 2—Activity 1: Review the key vocabulary that will be addressed in this lesson. You will use this sheet again for Activity 3.

Vocabulary List

Agricultural	ag • i • ul • tur • al <i>adj</i> 1. involving or relating to agriculture 2. with farming as the dominant way of life
Aquifer	aq • ui • fer <i>n</i> a layer of permeable rock, sand, or gravel through which groundwater flows, containing enough water to supply wells and springs
Hydrology	hy • drol • o • gy <i>n</i> the scientific study of the properties, distribution, use, and circulation of the water of the earth and the atmosphere in all of its forms
Municipal	mu • nic • i • pal <i>adj</i> 1. relating to a town, city, or region that has its own local government
Percolate	per • co • late <i>v</i> 1. vi to pass slowly through something or spread throughout a place
Recharge *	re • charge <i>vt</i> 1. the addition of surface water to an aquifer. 2. natural recharge occurs when naturally occurring surface water infiltrates through the unsaturated zone (vadose zone) and is stored in an aquifer as groundwater. 3. artificial recharge is an engineered system (either natural or human designed system) designed to store surface water in an aquifer. Artificial recharge occurs in two ways: surface infiltration and direct injection.
Siphon	si • phon or sy • phon <i>v</i> 1. vt to transfer liquid from one container to another through a tube using atmospheric pressure to make it flow

- Water and Power Dispatcher
- Water Resources Technician
- Water Resources Engineering Associate
- Water Services Supervisor

Lesson 3

Water Conservation

Time: 50 minutes

Content Areas: Science, Social Studies, Language Arts, Workplace Skills

Lesson Overview/Purpose

The purpose of this lesson is to help you develop a greater understanding of water conservation and the role we all play in conserving water. First, you will learn about and analyze the natural, chemical, and technological methods CAP uses for conserving and augmenting water to ensure adequate supplies. Second, working in small groups you will outline ways to conserve water. Then, you will develop a technology-based presentation for an identified audience.

Objectives

At the end of the lesson you will be able to:

- Categorize information presented.
- Prepare a presentation for a specified target audience.

Vocabulary

- Augmentation
- Desalination
- Phreatophyte
- Storyboard

Online Resources

- [CAP Videos](#)
- Online Water Calculator <http://www.cagr.com/index.php/general-information/conservation/water-calculator>
- Visit CAP Media Center or *Climate Impacts on Water Supplies*

Supplies/Materials/Equipment

- Internet connection and computer
- PowerPoint
- Notebook for journal entries
- Handouts provided in the lesson

Learning Unit Lesson Plans for Grades 9-12

Procedures

Step 1:

- Review key vocabulary for this lesson.

Step 2:

- Watch the video titled [Central Arizona Project: Augmenting the Colorado River](#).

Step 3:

- Use the *Conservation Methods Chart* to categorize and summarize the conservation methods identified in the video.
- Fill in the “Looks like...” column on the vocabulary sheet.
- Conduct an Internet search to identify ways individuals can conserve water.
- Add some of the methods identified on the chart and summarize what they involve.

Step 4:

- Summarize your learning by creating a PowerPoint™ presentation that educates or informs peers how to conserve water.

Step 5:

- Record and answer the following questions in your journal.
 - Why does CAP want to conserve water and not just distribute it?
 - What did you learn about your role as a “conservator” of water?
 - Who do you think has the greatest responsibility when it comes to water conservation: individuals, government, businesses, or CAP?
 - What role should government play in ensuring water conservation?
 - What did you learn about CAP’s water conservation efforts?
 - How are you affected by the methods CAP uses?

Learning Unit Lesson Plans for Grades 9-12

Lesson 3—Activity 1: Review the key vocabulary that will be addressed in this lesson. You will use this sheet again for Activity 3.

Vocabulary List

Word...	Means...	Looks like...
Augmentation	aug•men•ta•tion <i>v</i> Adding to something by taking from or using other sources	
Desalination	de•sal•i•na•tion <i>n</i> The process of removing salt from something, such as seawater or soil, by means of evaporation, freezing, reverse osmosis, ion exchange, or electro dialysis	
Phreatophyte	phre•at•o•phyte <i>adj</i> Removal of non-native plant species	
Storyboard	sto•ry•board <i>n</i> a set of sketches, arranged in sequence on panels, outlining the scenes that will make up something to be filmed, for example, a motion picture, television show, or advertisement

Learning Unit Lesson Plans for Grades 9-12

Microsoft by Bloomsbury Publishing Plc.

Lesson 3—Activity 2: Use the chart on the next page to record and categorize the conservation methods identified in the video and summarize what the strategy involves. Then, conduct an Internet search to identify ways the individuals can conserve water. Add some of the methods you learn about to your chart and summarize what it involves.

Conservation Methods Chart

Conservation Method	M e c h a n i c a l	T e c h n o l o g i c a l	C h e m i c a l	P e r s o n a l	This involves...

Learning Unit Lesson Plans for Grades 9-12

Learning Unit Lesson Plans for Grades 9-12

Lesson 3—Activity 3: Create a poster that educates your peers how to conserve water. Use the space below to plan your poster and then draw it on poster board or chart paper.

Lesson 4

Canal Safety

Time: 50 minutes

Content Areas: Science, Social Studies, Language Arts, Workplace Skills

Lesson Overview/Purpose

In this lesson you will learn about some of the canal safety issues encountered by CAPs Lands Department. Afterwards, you will discuss these issues and the potential dangerous or negative consequences they pose for both humans and animals. Then, you will work in small groups to design a mascot and coloring booklet or picture booklet for younger students to educate them about canal safety.

Objectives

At the end of the lesson you will be able to:

- Assess a problem to determine potential consequences and solutions.
- Create a product to educate others about a given topic.

Vocabulary

- safeguard

Online Resources

- [CAP Videos](#)
- See example of Otto the water safety mascot at: www.usbr.gov/pn/about/otto/index.html

Supplies/Materials/Equipment

- Internet connection and computer
- Notebook for journal entries
- Handouts provided in the lesson

Learning Unit Lesson Plans for Grades 9-12

Procedures

Step 1:

- Review key vocabulary for this lesson.

Step 2:

- Watch CAP's video titled [Central Arizona Project Land Issues](#).

Step 3:

- Read the list of challenges that the CAP Lands Department has to address.
- Make a list of ways people should and can safeguard the canals.

Step 4:

- Create a coloring or picture book for primary students that teaches them about canal safety.

Step 5:

- Record and answer the following questions in your journal.
 - What are some of the consequences for citizens not behaving responsibly around canals?
 - How can you help to safeguard the canals?
 - How can waste dumping be detrimental to the water?

Learning Unit Lesson Plans for Grades 9-12

Lesson 4—Activity 1: Review the key vocabulary that will be addressed in this lesson.

Vocabulary List

Safeguard	safe•guard <i>n</i> 1. something intended to prevent undesirable consequences from happening, for example, a safety device or measure, or a proviso in a legal document 2. a document providing safe-conduct <i>vt</i> to prevent something or somebody from being harmed, damaged, or lost
------------------	--

Learning Unit Lesson Plans for Grades 9-12

Lesson 4—Activity 2: Read CAP Canal Safety Challenges. Then, a list of “things” people should and can do to safeguard the canals in the space below.

CAP Canal Safety Challenges

The Lands Department is responsible for managing all the properties owned and operated by CAP. Such properties include: remote, mountainous terrain; vast open deserts; farm and grazing lands; and suburban environments.

Originally constructed in rural areas, canals are now being surrounded by urban growth and development. This growth and development has presented the Lands Department with challenges, including:

- Trespassing
- Illegal dumping
- Off-road ATV
- Dust Control
- Target Shooting
- Graffiti
- Encroachments

Water Depth and Flow

While the canal waters appear to be calm and dauntless, most people do not realize that the average depth of the CAP canals is 18 feet; the concrete sidewalls are steep and slippery; and flow rates run about 3,000 cubic feet per second or 2 miles per hour.

Vandalism/Theft

CAP has installed security fencing around the canals to prevent entry into the hazardous area by both people and wildlife. When vandals cut the security fencing, it creates holes for small children and wildlife to enter the hazardous area.

Thieves and vandals will often cut through the security fencing to gain access to the canal. In the process they destroy or damage equipment or property. Theft often includes the removal of copper and other valuable metals.

Target shooting not only poses a safety hazard to those nearby the canal, but can also cause significant damage to equipment and other structures. Other common forms of vandalism include graffiti and stolen cars that have been dumped into the canal.

Learning Unit Lesson Plans for Grades 9-12

Trespassing

This can often take the form of operating ATVs and motorcycles on the property. Such activity can cause major damage to area vegetation and cause significant dust pollution. CAP is responsible for maintaining dust pollution on the properties and can be penalized for violation, no matter what the cause.

Encroachments

Some people mistake the chain link fencing for CAP's property boundary lines. Unfortunately, this often results in encroachments by developers and new homebuilders. Typical encroachments include: block walls, fences, driveways, walkways, and landscaping.

Illegal Dumping

Often people will dump hazardous waste items, such as oil, paint, construction or landscaping debris, and industrial solvents. This creates a problem, as the chemicals can contaminate the water and are extremely costly to remove.

Trail Development

CAP boundaries are can be located up to ½ mile away from the canal security fencing and about 10-20 feet away on the south or west side. The narrower boundary has been designated for walking and bike paths, and trails to be enjoyed by people residing near the canal. While CAP can facilitate the construction of these upgraded recreational areas, they do not have the legal authority to develop, secure, or maintain them. Developers must incorporate these recreational paths into their development plans, if agreed upon by the municipality. However, it must be decided who will be responsible for the maintenance and oversight of the areas before the developer can proceed with the plans. CAP can only make these agreements with another governmental agency. Often these are homeowners' associations.

Learning Unit Lesson Plans for Grades 9-12

Lesson 4—Activity 3: Summarize your learning by creating a coloring book with captions or picture book for primary aged students that educates them about canal safety. Use the space below to create a storyboard, which will serve as a guide when creating your final draft. You can also create a storyboard by printing blank PowerPoint™ slides.
