Snowpack Accumulation

As of 12/27/2017, the current SWE is at 66% (3.5 in) of the long-term average (1981-2010) of the water year to date (5.4 in). When compared to the seasonal long-term average (14.2 in) the current SWE is at 25% of the entire season for the current water year (2018).

The December 24-Month Study indicates that Lake Powell inflow for Water Year 2018 is forecasted to be 71% of normal. However, the study still forecasts a 9.0 MAF release from Lake Powell for Water Year 2018.

Annual Colorado River Diversions

The 2017 forecasted end of year annual consumptive use for the Lower Basin states are significantly lower than each state's annual Colorado River apportionment. California will divert 395,690 AF less than its annual apportionment (lowest diversion since 2003). Arizona and Nevada will respectively divert 299,823 AF and 56,733 AF less than their annual state apportionments. The total forecasted Lower Basin diversion for 2017 is by far the lowest annual Lower Basin diversion since 2003.
