

System Use Agreement Section 12.1

“Reclamation and CAWCD shall establish uniform water quality standards for any Non-Project Water introduced into the CAP System.”*

Some questions to consider when proposing standards...

- Which constituents are included?
- Are standards based on existing programs/standards?
- Where are the standards measured/enforced?
- Can the CAP aqueduct be used for dilution/mixing?
- Are the standards affected by shortage?
- Are the standards affected by the size of the project?
- Do early projects affect later projects?
- Do upstream projects affect downstream projects?
-

**Note: There are articles in the standard form wheeling contract that address monitoring, reporting, enforcement, payment, liability, operations, etc.*
